Problem 1

Exercise Objective: Develop a simple Android application that converts Celsius temperatures to Fahrenheit.

Problem Statement 1: Create an app with one input field where the user can enter a temperature in Celsius. Upon pressing a "Convert" button, the app should display the temperature converted to Fahrenheit.

Expected Output: The app displays the temperature in Fahrenheit after conversion

This is XML code

```
<?xml version="1.0" encoding="utf-8"?>
<RelativeLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:tools="http://schemas.android.com/tools"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    tools:context=".MainActivity">

    <EditText
        android:id="@+id/editTextCelsius"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:layout_margin="16dp"
        android:hint="Enter temperature in Celsius"
        android:inputType="numberDecimal" />

    <Button
        android:id="@+id/buttonConvert"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:layout_below="@+id/editTextCelsius"
        android:layout_centerHorizontal="true"
        android:text="Convert"
        android:layout_marginTop="16dp"/>

    <TextView
        android:id="@+id/textViewResult"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:layout_below="@+id/buttonConvert"
        android:layout_centerHorizontal="true"
        android:textSize="24sp"
        android:textStyle="bold"
        android:layout_marginTop="16dp"/>

</RelativeLayout>
```

This is JAVA code

```
package com.example.temperaturereconverter;
